## MiniMax 10W Goboprojektor

Low in power consumption - maximum light output!

The Minimax live up to its name. Due to the extremely low power consumption and small housing size the Minimax fits into the smallest shop windows or displays.

Due to the low heat generation even selfprinted design templates on foils can be used. This makes a projection easily, inexpensively and provide a maximum of flexibility.

The unit is available in two different colour temperatures and two housing colours.
