## Power 300W LED Fresnel

More LED power – the name rules. Could current LED Fresnels withstand only with the light output of 1kW floodlights, the new SquareLED Power 300W is now close to the performance of a conventional 2000W lamp.

The high-quality device in the attractively designed diecast housing meets all the requirements of professional users. The tungsten version with 3200K is quickly distinguished by the yellow colored casing handles from the daylight version with 5600K and blue colored casing handles. The active fan cooling of the LED is done by an extremely low-noise fan, so the use also in noise sensitive environments is mostly possible.

As with all models of SquareLED Fresnel series it is also with this device: the control can be done directly on the device or via DMX. The beam angle can be adjusted manually by using a spindle and is infinitely adjustable from 15° to 80°. For operation in high ceilings there is also a Pole Operated version available. The barn door is always included in the scope of delivery.

### Technical Data:

- » LED Single Chip
- » Lens Diameter: 200 mm
- » 3200K±150K or 5600K±250K (depends on model)
- » CRI: >85
- » Output Illumination: >10000 lm
- » MX512+LCD Touch Screen
- » Neutrik Connectors
- » DMX Channel: 1
- » Dimming: 0~100%, 16bit
- » 100~240V AC50~60Hz
- » Consumption: 300W
- » Operation Temperature: -10° ~40°C
