Live Show software

THE SOFTWARE OF THE FUTURE

Live Show Software is the innovative combination of:
DMX lighting controller, sound regulation, media projections

Supported Operating Systems:

Windows (Windows 7, Vista, 8, 10) / Mac OSX (Lion) / Linux

EASY HANDLING

- The entire show (DMX, sound and media) can be programmed via one timeline.
- The operation is similar to a music editor program.
- No midi trigger needed - WYSIWYG.
- Convenient remote control via Android and easily via wireless mouse (Several Android devices with different permissions).

Professional features:

- DMX lamp Tracking: Apply DMX settings from other cues and lamps.
- Movement calibration of scanners / moving heads without the need of 3D models.
- On the fly replacement of lamps. Lamps can be easily replaced by other lights, as many DMX settings are undertaken as possible.
- Complete projects can be exported and ported to another computer.
- Lamp Editor: Easy implementation of new lamps without complicated programming.
- The media player can be done in one or more external computers. The control works via network connection (LAN or WLAN)
- The times of scene changes can be recorded. Shows the remaining time until the next scheduled change. Warning messages in different display colors when the next change is to be done.

Currently supported DMX hardware interfaces:

- DMX4All (Mini and Nano Interface)
- Enttec DMX USB Pro
- LAN interfaces, which support ACN Streaming (ACN 1.31) (for example: sandbox)
